## RSVP™

### Remote Secure Vaulting and Protection

*Comprehensive Data Protection and High Availability Without the High Cost*

RECOVER

**On Site:**  
**Quick Recovery**  
**High Availability**

**Off Site:**  
**Hosted Data Protection**  
**Disaster Recovery**

Remote Secure Vaulting and Protection™ (RSVP™) service from Open Storage Solutions® is a business-class remote backup solution that enables you to safely and securely maintain a copy of all your protected data off-site. No longer is the lack of a secondary data centre an impediment to disaster recovery (DR). With Open Storage Solutions' RSVP you can effectively maintain a complete level of recoverability during any outage or disaster. Open Storage Solutions' RSVP allows you to fully realize the cost benefits and piece of mind that maintaining a secondary offsite copy of your protected data will provide. Not only can RSVP deliver this economically, RSVP also eliminates or reduces your dependence on tape media, tape device hardware and manual tape shipments, all of which are frequently identified as vulnerable points of failure in your data protection scheme.

PROTECT

# RSVP™ Remote Secure Vaulting and Protection

## Simple, Secure, Affordable

When there is not enough backup, and your backup is not enough. Your ever-growing volume of data stands face to face with your narrowing backup window, and your over-deployed budget. This is where the traditional approach to data protection fails. But, you still have to maintain levels of service as you try to design a new solution; at the same time, you're trying to determine which data is most critical, and which you can afford to lose if the worst should happen in the interim. And, who will make that decision. With RSVP from Open Storage Solutions, you don't need to make those decisions; all your data is protected.

### Your first two questions should be:

**What is your recovery time objective (RTO)?** That is, how quickly do you need to recover from a data disaster?

**What is your recovery point objective (RPO)?** How much data can you afford to lose between the disaster and the last backup?

With RSVP from Open Storage Solutions, you can be up and running in seconds and all your data is protected.

- Local and/or remote system high availability (HA)
- Fast, efficient and verified backups
- A secure datacentre
- On site continuous data protection
- Off site data vaulting with remote monitoring service
- Audited remote copy validation with documented reporting and monitoring
- First-call technical support by our highly trained experts
- Quick start setup
- Disaster recovery and emergency restore support

### Remote Secure Vaulting and Protection (RSVP)

Remote Secure Vaulting and Protection from Open Storage Solutions® gives you enterprise-class data protection without the enterprise-class costs. You get off-site data vaulting in a secure facility so you can be assured that your data is protected off site. In addition to your off-site copy, RSVP includes local continuous data protection, providing the quickest data recovery. You can also maintain high availability (HA) and have an option to failover your systems in the event of a structural, environmental or cataclysmic disaster. RSVP provides a comprehensive defense against logical failure, physical failure and site failure.

### Specialized offering for multiple platforms:

Open Storage Solutions is a data management and storage solution provider. With a more than 30 year track record of bringing high value solutions and services to an ever-growing number of customers. Open Storage Solutions maintains relationships with not only the industry leaders, but also the most innovative technology leaders. We take pride in our diligence in evaluating the available strategies, methodologies and technologies to always improve on service levels while reducing our customers' costs.
