Storage Assessment For the Enterprise

Storage is critical to the success of your company; a sound infrastructure is vital. Increasingly complex, it's become a huge percentage of your overall IT budget. Expertise, planning and much forethought is key. This, however, requires time and resources that most IT organizations can't afford to remove from the day-to-day demands of keeping the data center running.

As specialists in storage management for over 25 years, Open Storage Solutions® Inc can provide an expert, third-party, objective analysis of your infrastructure. Our objective will be to provide you with answers to these questions:

- **What type of storage will best meet our needs?**
- **Will tiered storage reduce my costs?**
- **How much storage will be required?**
- **How will we backup our storage?**
- **How do we achieve our availability goals?**
- **Will the solution scale to meet my needs?**
- **Can I consolidate my storage?**

As part of this service, qualified Open Storage Solutions consultants work with your team to first understand your storage management needs, challenges and vision.

Then, we will review and document your storage infrastructure, application and data requirements.

Next, we assess your current storage environment against your needs and industry best practices to identify gaps.

Finally, we present our findings and recommend improvements.

An Open Storage Solutions *Storage Assessment* will provide you with the confidence that your storage management infrastructure will meet your service level expectations today and continue to do so tomorrow.
